

TELUS IP Trunking

Apply the benefits of your IP network to your voice communications.

You have an IP-PBX, but your voice and data communications are still separate. That means you have two different networks to manage, and your scalability is limited by PRI blocks or Centrex configurations. With TELUS IP Trunking your voice traffic is carried as an application on your TELUS IP Access service. It's more efficient, allows you to scale up or down more easily and can potentially help you reduce long distance charges for inter-office calling.

Use your excess network capacity to cost-effectively support your voice channels.

With TELUS IP Trunking, you no longer have to contend with the limitations of traditional voice services. Instead, you can configure your IP voice capabilities precisely to suit your needs. You can react faster to changing business needs, integrating new sites quickly and easily as you grow.

You can also have the same single solution for all your locations, and you can configure it to minimize long distance charges for inter-office calling. Plus, you will be investing in new technology rather than building onto aging solutions.

Peace of mind and all the features you need for your business.

The architecture of TELUS IP Trunking is highly resilient. If service goes down at one of your locations, you can redirect your voice traffic to another site.* You can also add the TELUS ServiceSaver® option to forward calls to an alternative number in the rare event of an equipment outage or a local disaster that prevents you from working at your usual place of business.

In addition, with TELUS IP Trunking you get:

- **Alternate Number Delivery:** choose the number you want displayed when calling out, allowing you to appear local regardless of your physical business location
- **Optional Automatic Calling Line ID Blocking*:** prevent your numbers from being displayed on an outbound call
- **Real-time fax capabilities:** send and receive faxes over your IP network, without the need for a dedicated fax line
- **Nomadic 911:** enable a prompt response if a 911 call is placed from one of your offices, as a TELUS operator will make sure the correct address is provided to first responders

Why you should choose TELUS IP Trunking

- TELUS is one of Canada's leading telecommunications companies, with proven expertise in providing voice and data services
- Our networks meet the highest standards for security and reliability
- Built-in disaster recovery and business continuity capabilities help keep your business operating, even if you cannot work from your usual location
- We are committed to providing a world-class customer experience and will support all components of your IP Trunking solution

Expect more from your voice services. Contact your TELUS Account Executive, visit telus.com/iptrunking or call 1-877-710-0404 to learn more.
