

# Security Awareness Training

Change behaviour. Reduce risk.

There is so much innovative cyber security technology deployed within organizations today. So why are breaches from phishing attacks still on the rise? The greatest security gap for organizations may not be technology. It may be your employees.

Today's savvy phisher manages to evade even the most significant safeguards through carefully planned, socially engineered phishing attacks. According to Verizon's Data Breach Investigations Report, 95% of all espionage attacks and nearly 80% of all malware attacks involve phishing. And people — your internal users — are the largest and most vulnerable point of entry.

TELUS has substantially reduced the success of phishing attacks against our employees through an innovative training program with our security education partner Wombat Security Technologies.

## The Wombat Platform

- **Assess:** CyberStrength and ThreatSim
  - CyberStrength® Knowledge Assessments
  - ThreatSim® Simulated Phishing Attacks
- **Educate:** Interactive Training Modules
- **Reinforce:** PhishAlarm and Security Awareness Materials
- **Measure:** Comprehensive Reporting Tools

## Continuous Training Methodology

The Wombat Continuous Training Methodology allows you to integrate assessments, interactive training, awareness materials, and comprehensive reporting features. The flexible cloud-based Security Awareness Platform puts you in control; you decide what to deploy, and when and where to deploy it. The Wombat approach is about results: Organizations have used the Wombat methodology to reduce successful external phishing attacks and malware infections by up to 90%.

Try their [demo](#) and find out how Wombat's Continuous Training Methodology can provide integrated assessments, interactive training, awareness materials and comprehensive reporting features. You can also learn more about the phishing attacks in Wombat's latest report, "The State of the Phish." You can download the report or view their webinar [here](#).
